LUMINOUS SECURITY

A NEW DIMENSION OF LIGHT

WAS LIGHT TECHNOLOGY - SAFETY LIGHTING

Since 2014, **WAS LIGHT** has specialized in **electroluminescent film technology**. Based in **Lyon**, the City of Lights, we manufacture and animate **luminous adhesives** capable of emitting non-glare, uniform light without halos: light that signals without illuminating. Our **exclusive, patented** technology reinvents signage by offering tailor-made solutions with customizable lighting areas, opening the way to an infinite number of applications in the world of signage and safety. WAS LIGHT ensures **100% French production that is environmentally friendly**. With a fully controlled light source, you become the master of your visibility.

Unique technology

Thinness: less than 1 mm thick

Ultra-thin, lightweight, flexible, and adaptable adhesive tape. Suitable for all types of surfaces.

Brightness: visible in the dark, without lighting up

Our technology diffuses glare-free light that is visible from a great distance without relying on an external light source.

Mechanical strength:

Shock and vibration resistant technology, supports a load of 250 kg/m².

Distance & visibility: penetrates fog and smoke

- Individuals or objects visible at:
- 150 m in clear weather
 - 100 m in rain
 - 50 m through fog or smoke.

Vehicle power supply: 12/24V

Power supply unit (made in France) compliant with ECE-R10 regulation, complying with applicable EMC standards (Electromagnetic Compatibility).

INNOVATION - LUMINOUS RETRO-REFLECTIVE FILM

Until now, reflective signage depended on an external light source to be visible in the dark. Today, thanks to **WAS LIGHT** technology, the equipment itself becomes a light source. This innovation opens up new possibilities in terms of enhancing safety and visibility for public institutions: police, gendarmerie, fire department, army, and local authorities.

Enhance the safety of your personnel by combining optimal visibility with operational discretion.

Make your drone landing zone identifiable to ensure high-precision landing without revealing your strategic position.

Secure your emergency vehicles even in the most difficult conditions (low light, fog, rain, smoke).

Signal your presence in the dark with clear, non-dazzling identification to ensure the safety of emergency responders.

RESPONSIBLE LIGHTING

WAS LIGHT offers a high-performance lighting solution with very low energy consumption. It provides gentle lighting that complies with light pollution regulations. A sustainable approach that respects the environment and biodiversity. Committed to 100% French and eco-responsible production.

All your visuals are reproduced to measure. Applicable on all media, even where no other lighting technology can be integrated.

OUR COMMITMENTS

Personalized support at every stage of your project.

Was Light works with **the best professionals** for each of these stages. A national network of expert installers ensures installation and follow-up for the success of your project.

Our **R&D department** works every day to improve our technology and develop new applications.

Our entire machine tool fleet is **located in Lyon**, which allows us to provide comprehensive monitoring of your project's design, from the initial idea to final completion.

Our strong **commercial and industrial adaptability** allows us to meet all your organizational and/or deadline requirements.
